SEP 01 | SOFTWARE PROFILE PROJECTOR FROM SCANNER

Acquisition, processing, analysis & visualization of images

Equipment Description

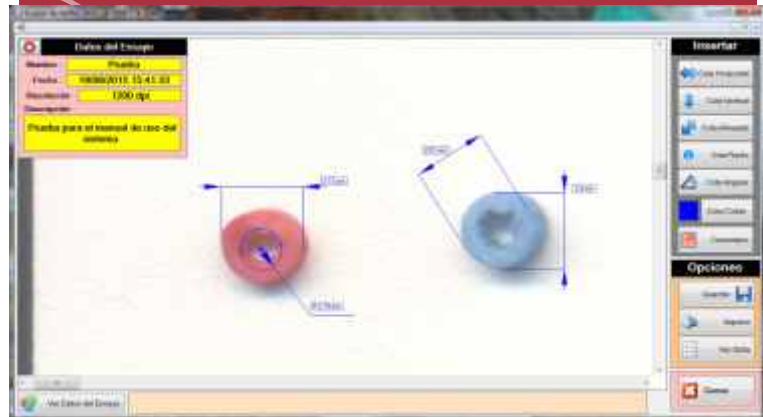

The Scanner de Perfiles is a software + Scanner that allows the acquisition, processing, analysis and visualization of images of small dimensions.

The acquired image is processed and analyzed to be able to be extended 12 times. With that size it is possible to measure on the same one with a **precision of 0,025 mm**.

The system Scanner de Perfiles allows to measure in screen through vertical cursors and horizontal, it is possible to be added levels like any program CAD, allows to rotate the image, to keep archives, to generate reports and to print them or to export them to .pdf.

PC Requiriments:

- Ram memory: 512MB (or better).
- HDD free space: 10GB (or better).
- Operating system: **Windows Xp**.
- Screen Resolution: 1024 x 768px (or better).
- Monitor: 17" (or better)
- 1 USB Port.

Technical Characteristics

- Software of very easy use
- To acquire images from scanner.
- To Save in files for its later visualization.
- To open files already kept.
- To publish files.
- Print screen, visualized in the monitor, to paper.
- To generate report in format pdf.
- Cursors to measure on the image:
 - Verticals.
 - Horizontals.
- To insert levels:
 - Verticals.
 - Horizontals.
 - Radial.
 - Aligned levels (Diagonal).
 - Angles.
- It can Rotate the image.
- To insert commentaries
- Grid:
 - To select color.
 - To select spaced.
 - To visualize or to hide.
- You can set:
 - Decimals digits.
 - Color dimensions.
 - Company name.
- User Manual.

SECOM reserves the right to change the specifications or design without prior notice.
